AGR FIELD OPERATIONS

We offer a wide range of products and services needed for managing the operation, technical support, inspection, and maintenance of oil & gas wells and associated infrastructures through the entire life of the field. Our Maintenance management solution ensures improved business integration and overview by delivering our solutions in one cost-effective way.

MAINTENANCE MANAGEMENT

We provide our clients with a total maintenance management solution in one integrated package. Our focus is to deliver programs and plans into our clients computerised maintenance management systems.

We develop the maintenance management systems required for safe and professional operation. Our solutions ensure improved business and have several benefits such as:

- Reduction of total cost to the owner
- Cross-departmental cost efficiency
- Superior overview and understanding
- Elimination of redundant tasks

MAINTENANCE ENGINEERING

Our products provide clients with a total maintenance management solution in one integrated package. Our solutions ensure improved business integration and overview by delivering our solutions in a cost-effective way. This has several benefits for both the owner of this solution as well as for the end user who implements the solution. Some benefits for the owner are; reduced total cost of owner, cross-departmental cost efficiency, superior overview and understanding, and elimination of redundant tasks.

CORROSION MANAGEMENT

SOLV optimises the maintenance operations regarding cost, safety and quality. The concept is based on a methodical and detailed recording of total maintenance scope, surface condition and other relevant data of corrosion management.

Our highly skilled personnel, combined with a substantial amount of empirical maintenance data recorded and structured in our tailor-made database, makes sure our clients stay "top of the league" as regards to their corrosion management, including insulation and surface maintenance.

The SOLV concept is used within the following disciplines:

- Corrosion management program
- Corrosion Under Insulation Inspection Method (CUIIM)
- Surface treatment - Coating
- Supplier evaluation

making tomorrow better.

FACILITY MAINTENANCE

AGR Field Operations provides fabric maintenance support to 52 North Sea units and several major onshore oil and gas reception and processing facilities. This activity employs in excess of 200 specialists, and we have proven up to 50% savings for our clients in fabric maintenance expenditure. Our capabilities are:

- Facility management
- Insulation maintenance
- Corrosion under insulation inspection method (CUIIM)
- Technical security
- Contractor management

PROGRAMMES & PLANS

We supply programmes and plans for Computerised Maintenance Management Systems (CMMS), ensuring that operators and maintenance staff receive work orders and programmes prior to plant start-up. Our toolbox includes:

- Assessing criticality and risk evaluations
- Developing preventative maintenance programmes
- Provision of failure reports
- Setting in place coating and insulation maintenance programmes
- Managing technical safety
- Writing spare parts requirements
- Developing management systems for technical documentation
- Support of programme updates and optimisation
- Assessment of performance
- Assessment of KPIs
- Managing audit
- Consultancy of business processes
- Monitoring performance
