

## Operations & Maintenance

### AGR FIELD OPERATIONS

We offer a wide range of products and services needed for managing the operation, technical support, inspection, and maintenance of oil & gas wells and associated infrastructures through the entire life of the field. We also provide operations and maintenance personnel and full technical and project management support teams, as well as provide specialist consulting services.

### OPERATIONS & MAINTENANCE

AGR Field Operations performs a variety of key tasks, providing operators with expertise in production technology as well as planned inspection, cleaning and maintenance of installations. We offer profitable facility operations and maintenance services combined with a broad range of technical, administrative and regulatory interface services.

We maintain and provide managerial and technical support in a cost effective way to a number of offshore and onshore - oil and gas production facilities on behalf of the asset owner.

AGR is registered by the Australian National Offshore Petroleum Safety Authority (NOPSA) and Regional Authorities as the “nominated Facility Operator” for all of the facilities we operate and maintain in Australia. We also provide a broad range of technical, administrative and regulatory interface services for a variety of clients. Our competitive advantages in contract operations is our capacity to maintain a culture within our operations team where risk identification and mitigation is unambiguously embraced as our top priority and our ability to merge our operations teams with the asset owners culture.

AGR operates a comprehensive Integrated Management System (IMS) for each of our operations and maintenance contracts. The IMS elements are aligned with regulatory guidelines for the development of offshore safety cases and onshore operations plans and also embody the requirements of ISO 14001 for the development of environmental management systems. AGR also maintains its IMS to the requirements of OHSAS 18001 for Health and Safety and ISO 9001 for Quality. We provide specialists to assist Operators comply with the legislated requirements relating to Technical Integrity.

Our Integrity Management Specialists skills include:

- Discipline focused technical departments
- Define Barriers, Performance Standards and Examination schemes
- Monitor Technical Integrity and report technical condition
- Monitor changes in the technological development
- Inspection strategies
- Fitness for Purpose analysis
- Risk evaluation and RBI analysis
- Condition assessment

## HSE MANAGEMENT SYSTEMS

### General

AGR can provide a suite of systems and capability to meet the legislative requirements of exploratory production and testing leading to full production development. This includes inter alia Safety Cases, Environmental Plans, and Safety Management Systems.

### Health and Safety

Risk Assessment Processes using Risk Engineers for HAZOPS, HAZIDS and HAZANS leading to modelling work and risk register. Incident investigations using TAP ROOT techniques, HSE Plans and other risk assessment processes are part of the activities carried out by AGR.

### Health and Safety Systems

Safety Case preparation and Implementation for the new sites (offshore and onshore); Emergency Response Plans, Permit to Work Systems and audits. Preparation of Environmental Plans for a number of clients at the various phases of a field development

### Regulatory Compliance

Compliance with National Regulators – NOPSA etc; and the Legislative Compliance Register for various Clients for both onshore and offshore sites have been a strong area of activity.

### Training Services

AGR Group offers comprehensive training consulting services to the Oil and Gas industry. Our training consultants are well versed in industry Learning and Development, as well as legislative training requirements. We have significant in-house Intellectual Property for training requirement setting and record management systems.
