

# AGR's Integrated Logistics Solutions team manages logistics and procurement of exploration well in Morocco

## OVERVIEW

AGR was awarded the contract to provide well project management services for an exploration well offshore the west coast of Morocco for Genel Energy.

Nour Well 'Sidi Moussa-1' was planned and drilled during the Q3/Q4 2014 with supply base set up in Agadir.

The complicating factors:

- A complex customs and importation process
- Limited local infrastructure and services
- Shared berth and storage facilities with other operators

## APPROACH

AGR's client was part of an operator consortium. To solve the assignment, AGR's Integrated Logistics Solutions team engaged with the other operators' in-country suppliers to ensure that the base, storage and quayside facilities were up to the standard required to support drilling Sidi Moussa-1.

Identifying the potential problem areas as early as possible was the key to form effective plans.

AGR worked remotely with service providers to establish shipping requirements and manageable timeframes; performed personnel, equipment and materials movements daily with the use of helicopters and vessels; managed the demobilisation of equipment to Aberdeen (UK), Tenerife and Las Palmas (Spain); planned and executed the rig move from Morocco to Tenerife.

## SOLUTION

Working around a complex import & export process, AGR's client could benefit from successful delivery of all operational requirements efficiently and on schedule.

AGR brought their consistent strong work ethic to the client.

## VALUE ADDED

- Expert planning and coordination prior to the start of the project right through to the demobilisation and wrap up phase
- A team with years of experience in various locations
- Remote operations experience including logistics base set up and materials management
- Operational HSE compliance expertise
- Project delivered in a safe and timely manner.
