Blending

Blending learning has emerged across the industry as a means of combining different learning and development methods. We take a broad view on 'blending' and see this as going beyond traditional e-Learning packages. Instead, we view blending as a multi-stranded approach to training, working from experiential learning principles, embracing Open Air™ and utilising a range of e-Products. Any of these can be combined as optional components of a TRACS Training event.

Products range from conventional e-Learning modules to quiz-style modules and more advanced packages involving team-based collaboration and technical study. These can be assisted by digital material in the form of e-Books and e-Tools, the latter including a variety of products such as cellular models and spreadsheet tools.

In liaison with our partners WildHoney, we can efficiently generate e-Learning modules and either make these available via our own domain or write them in a format suitable for loading into a client's existing learning portal. All modules are database-linked so results can be collated and used

during face-to-face training sessions. This is often done as a means of identifying knowledge gaps prior to a course; the course emphasis can then be adjusted to avoid teaching 'known' information. Modules can also be equipped to provide virtual field graphics, in the event that courses would benefit from analogue outcrops which cannot be practically accessed from the venue.

Early Development
E&P Overview
Reservoir
Wells

Business & Risk
Open Air
Coaching
Master Class

e-Products continued

Existing products

Graduate Foundation Training – blended learning

BP, International (since 2010)

- regional information
- outcrop data study

PDO, Oman (since 2012)

- fundamentals of subsurface geoscience & engineering
- technical fundamentals - understanding the E&P lifecycle

Graduate Advanced Training – blended learning

BP, International (since 2013)

- producing assets
- new developments

People

For enquires on any e-Products or wishes on blended learning please contact:

Mark Bentley, Training Director mark.bentley@agr.com

Mark Bentley PhD

Main Series tutoring: Reservoir, E&P Overview, Open Air and Master Class

Industry experience: over 25 years, geoscience

Career background: Shell, TRACS and AGR

Personal: Author 'Reservoir Model Design', SPE and EAGE Distinguished Lecturer, AGR TRACS Training Director

Fiona Swapp HNDip, DipSBA

Main Series: e-Learning, Design and development of course materials across all Series

Industry experience: over 25 years, graphic design, multimedia and photography

Career background: AGR, TRACS, Aberdeen Drilling Schools, Silversea Design, Alan Whyte Associates, Mammoth Design

Personal: AGR lead designer, e-Products coordinator. Published illustrator. Botanical artist.
